Art Unit: 2661

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:

I. Claims 43-80, drawn to group I, classified in class 370, subclass 312.

II. Claims 81-91, drawn to group II, classified in class 370, subclass 390.

II. Claims 92-97, drawn to group II, classified in class 370, subclass 432.

The inventions are distinct, each from the other because of the following reasons:

2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as being used in a radio environment (using RLC) wherein a MAC layer receives multicast control data from the RLC through logical control channel(s), and multicast data gets provided through at least one transport channel. Invention II can be used for locating a frame within a multicast control channel. See MPEP § 806.05(d).

3. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of

Art Unit: 2661

their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

5. Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the combination specifies using a physical layer (PHY), a MAC layer, and an RLC layer wherein the MAC layer receives multicast control data from the RLC through logical control channel(s), and multicast data being provided through at least one transport channel. The subcombination has separate utility such as a multicast service method which merely provides logical control channels for a number of traffic channels.

6. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by

Art Unit: 2661

their different classification, restriction for examination purposes as indicated is proper.

7. This application is in condition for allowance except for the presence of claims 81-97 to groups II-III non-elected without traverse. Accordingly, claims 81-97 been cancelled.

#### **REASONS FOR ALLOWANCE**

8. The following is an Examiner's statement of reasons for allowance: Claims 43-80 are considered allowable since when reading the claims in light of the specification, as per In re Sneed, 710 F.2d 1544, 1548, 218 USPQ 385, 388 (Fed. Cir. 1983), none of the references of record alone or in combination disclose or suggest the combination of limitations specified in the independent claims including using a physical layer (PHY), a MAC layer, and an RLC layer wherein the MAC layer receives multicast control data from the RLC through logical control channel(s), and multicast data being provided through at least one transport channel, as specified in claim 43.

Any comments considered necessary by Applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
